

IDEM 2020

Singapore

ISRAEL EXPORT INSTITUTE

Israel's Dental Industry: Crowning Innovation

The **Israeli Oral and Dental Industry** includes more than **120 manufacturing firms**.

Numerous companies have reached international recognition and acceptance, and have become leaders in their field. Notable acquisitions of Israeli companies in the dental sector took place in recent years from the known implants of **AlphaBio by Nobel Biocare**, to **MIS by Dentsply Sirona** for \$375M in 2016, to last year's merge of the Israeli **Paltop Implants** to the US **Keystone Dental**, forming a global dental implant player with nearly \$50 million.. Other giants in other dental sectors like **Carestream** and **Align** also acquired Israeli companies and kept their R&D center in Israel.

Furthermore, Israel being a start-up nation has a vibrant dental ecosystem of whom 30% are start-up companies with innovations.

While the **Israeli dental implant sector is leading with about 30% in the number of companies**, together with the related sectors in equipment, devices, tools and regenerative solutions, it amounts to almost 50%.

Other dental sectors are growing (such as **Oral Care, Restoratives, and Infection Control**). The latter **is** offering solutions useful in times of COVID.

However, the fastest growth is in the use of **digital technologies** and accounts now for 13% from our dental sector from **AI software** that offer diagnostics & treatment planning in 3D, to **platforms that assist the workflow** between Clinics and Labs, to **intraoral scanners**, to **3D printing**, and even **tele-dentistry**. Altogether they offer more efficient processes for more value.

Asia is the a growing commercial destination for Israel's dental industry. Israeli dental companies are looking for distributors and/or strategic partnerships to enhance their growth and some offer OEM.

Soft laser Dental Care

B-Cure Laser Dental Pro: The Innovative, Effective Treatment for Post-Dental Procedures

B-Cure Laser Dental Pro, has developed a patented, clinically proven Low Level Laser Therapy ("LLLT") medical device, for an effective treatment of clinical conditions in dentistry.

This simple, safe & mobile device provides dentists with the option of offering patients an adjunctive treatment which assists patients during the post-treatment recuperation process. It reduces pain and swelling significantly, helping them to return to their normal lives sooner.

Some of the applications are:

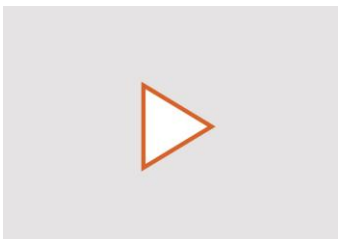

- Surgeries such as implants & crown preparation, or endodontics
- Regeneration (GBR) technique
- Soft tissue lesions
- Deep Scaling
- Gingivitis treatment and periodontitis treatment
- Differential diagnosis of hyperemic pulp
- Facial Pain and Reduced TMJ pain

Combining this effective therapy with the ability to provide immediate initial treatment at the clinic and continuous treatment at home, results in faster, high-quality recovery

Innovative Files
Disinfection kit

MedicNRG specializes in Endo oriented products, and has developed a unique approach to root canal preparation

Worldwide, many root canal treatments fail the first treatment because of incomplete disinfection procedures in the root canal.

The **“Tornado” disinfection kit** allows to clean canals in less than a minute. Without aggressive chemicals, this smart system brings a reliable results as it destroys the biofilm (even when irregular cross sections). It uses 3 forces together: Activation of the NaOCl, Turbulence effect, and this allows the Gentle-File hand piece powered at 6500 RPM to deploys open 6 tiny wires (0.06mm) to scrub & smooth the 3D root canals anatomy.

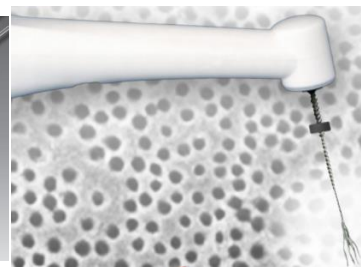

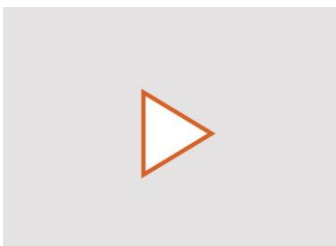

When prepared with a traditional rotary NiTi system, it is first required to clean with the **Red Gentlefile** to remove the rest of the debris left in the apical third. And to finish with the Gentlefile Brush.

MedicNRG also develop the ApexNRG RIDER™ S3 yields unparalleled accuracy, reliability and real-time measurements. It can be used in riding mode (mounted on the endodontic handpiece), satellite or manual.

Guttapercha cutting
instrument

The Guttacut™ Instrument: a Safer & Faster method for cutting the gutta percha during root canal treatments.

This precise instrument completely eliminates the possibility of accidentally burning the patient's mouth as it is inserted into the patient's mouth in a cold state, and heats up instantly when needed, As soon as the cutting has taken place, the button is released to cool down within second for safe removal from the patient's mouth.

The loop on the cutting tip provides easy access to the cavity as it catches the excess gutta-percha precisely at the canal orifice. This hot cutting prevents the filling material from becoming loose unintentionally.

The Instrument is supplied with 4 different size of cutting tips, which are removable and reusable.

The Instrument is distributed in Europe (VDW), Japan, South Korea, ...

The Guttacut™ - Smart Instrument offers you: Safety of use, Simplified, Flexibility as well as Time & Cost efficiency.

PIS – Post Implant Solutions

Dental Sectors

Periodontics
Implantology

Product Categories

Prosthetics

PIS is the development of a new start up that deals with the most acute problem of implantology: Periimplantitis!

It is the inflammation around new implants that leads to their fast failure, due to bone loss. This bone loss makes it very hard to make a new implant as a replacement.

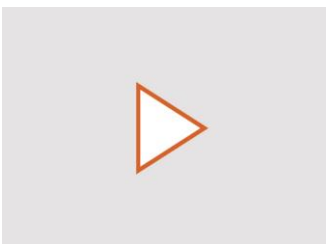

Our PIS - Post Implant Solutions allows this inflammatory process to stops and enables the patient to continue enjoying his implants for a long time. Thus saving the dentist and the patient great inconvenience and suffering.

After cleaning the implant area, a sleeve is inserted with tissue friendly bacteriostatic cement to close the gap. The sleeve can be smooth, thus enabling attachment of the gingiva by long epithelial attachment . Or we can provide a rough surfaced sleeve for bone augmentation. The same abutment and same crown can be returned on the implant..

Product Categories

Modular dental implants
Dental implants anti-leakage technology

The patented Modular type Dental Implant MtDI™ is a game-changer, eliminating total extraction in case of Peri-implantitis.

This system is compatible with standard implants dimensions, tools & techniques. It consists of multiple sections (rings) that easily connect or separate to achieve a customized length during the implantation process. It includes a novel TABS™ preventing leakage around implant.

Over time, Peri-implantitis affects 1/5 of all implants and 1/3 of the patients. As there is no reliable treatment available, often dentists must completely replace the implant. This painful and costly process is felt as a clinical failure. It is time consuming for the dentist and increase risks of complications.

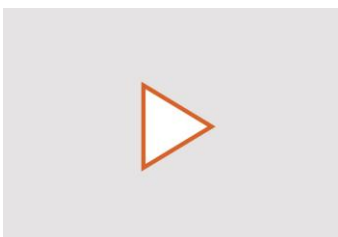

With Zeev's modular Implants, dentists can simply remove the bacteria-infected ring and replace it with a new sterile one, eliminating risks and costs due to total extraction. It furthermore provides the ability to re-use original crown & bridges It's critical in cases of poor prognosis patients (smokers, diabetes etc.)

This system can be adapted for each manufacturer to offer an alternative solution to peri-implantitis management by its own design.

Indoor air smart
purification system

Relevant for COVID19

Aura Smart Air offers an all-in-one indoor-air purification and quality intelligence system.

The system filters and disinfects indoor air using a four-stage purification process while monitoring air quality in real time. When hazards are detected, Aura alerts the user immediately, providing insights into the origin of the problem and how to rectify it and sounding alarms if immediate action or evacuation is necessary.

In addition to keeping the user informed about conditions indoor, Aura also monitors outdoor-air quality, providing a holistic picture of both current and future conditions.

According to the Department of Labor statistics published in Business Insider, the dental profession ranked number one for the poorest air quality. In addition the EPA indicates that indoor air quality can be 5times more toxic than outdoor air.

Aura Smart Air's solution helps address the Coronavirus Pandemic and is ideal for operating rooms and waiting rooms.

Dental materials
Cement solver

Temp-Off™ is a liquid that dissolves all Zinc-Oxide base temporary cements, with or without Eugenol.

Temp-Off™ is a revolutionary patent-pending (PCT) product, already in use by thousands of dentists all around the world, which dissolves and easily removes the temporary cements used in prosthodontics. This easy method that saves chair time renders the present mechanical method of dissolving dental cements obsolete.

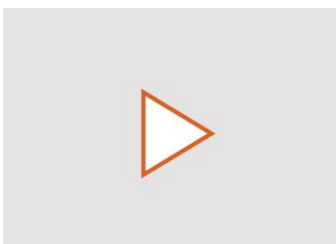

Breakage - As most of the temporary restorations are acrylic, and, as stated earlier, the cleaning process is mechanical, the main problem is breakage or perforation.

Contamination of the clinic or labs - The particles resulting from the removal of the temporary cement falls on the clinic floor, and contaminate the environment.

Innovative Antibacterial
Dental materials:
Composites restoratives;
Adhesives; Sealants;
Cements

Nobio developed InfinixTM a line of revolutionary antimicrobial dental materials, providing long-lasting protection against plaque, recurrence of caries and treatment failure.

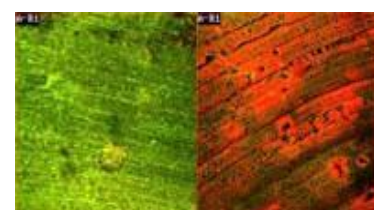

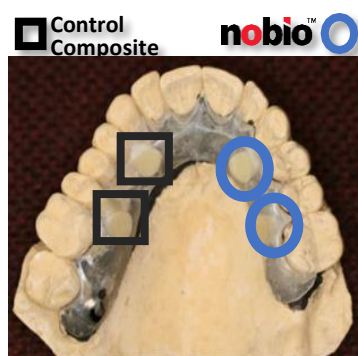

Composite restorations fail mainly due to recurrence of caries caused by bacteria at the restoration margins. Nobio's restoratives materials contain Nobio's antimicrobial particles that kill bacteria that may remain in the cavity.

The company is developing and plans to introduce additional innovative dental materials containing the long-acting antimicrobial technology, such as cements, sealants and preventive materials. The effectiveness and safety of the technology was reported in 22 publications, including two clinical trials.

Dental applications for Nobio's antimicrobial technology include: Restoratives , Cements & Sealants , Implants & Dentures , Preventatives

Cement solver

Temp-Off™ is a liquid that dissolves all Zinc-Oxide base temporary cements, with or without Eugenol.

Temp-Off™ is a revolutionary patent-pending (PCT) product, already in use by thousands of dentists all around the world, which dissolves and easily removes the temporary cements used in prosthodontics. This easy method that saves chair time renders the present mechanical method of dissolving dental cements obsolete.

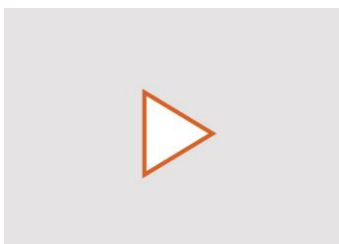

Breakage - As most of the temporary restorations are acrylic, and, as stated earlier, the cleaning process is mechanical, the main problem is breakage or perforation.

Contamination of the clinic or labs - The particles resulting from the removal of the temporary cement falls on the clinic floor, and contaminate the environment.

Programmable sand
blasting machine

The ST200 system is an innovative efficient & economical solution for dental implants surface treatment using abrasive media blasting.

The machine's operation is fully automated and programmable using a friendly and easy-to-use touch screen interface. With an intense and precise blasting, the machines gives excellent results with minimal blasting material usage and labor making it **efficient and economical**. The machine can work with **all types of blasting media** and can be installed in offices as well .

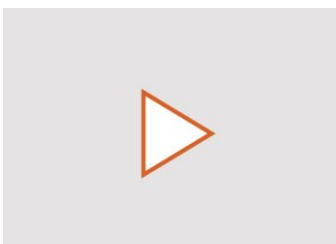

The machine's operation is **very quiet** and has an advanced air filtration system which guarantees **very clean** and quiet operation

Rotenberg is offering a full finishing line for companies wanting to upgrade their equipment or be able **to control the surfacing process for better quality and value.**

Hygiene Prevention & Management

Your hygiene is in your Hands.

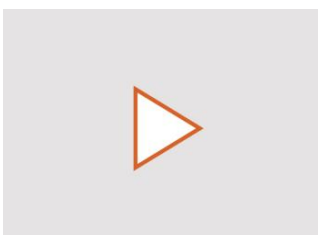

Soapy offers the first ever AI-enhanced, IoT-connected, eco-friendly hygiene micro station, helping consumers wash their hands effectively according to standards set by the World Health Organization. It uses the exact optimal amount of water and soap per hand washing. A computer vision interface verifies that the hand washing was done properly. The Soapy Wisdom dashboard enables facility managers to learn about usage trends among employees. On request, the soap will now include a plant-derived substance proven to kill tobamovirus – which is more resistant than the coronavirus.

Soapy is ideal for manufacturers to ensure a high level of hygiene prevention in their company and manufacturing facilities.
