SELF LIGATING FAMILY

ZIP_{Lp}

ZIP Lp is one of the smallest Low Profile, interactive self ligating bracket available in the market. **ZIP Lp** ensures a passive engagement to reduce friction, improving the sliding mechanics during leveling and alignment stages, while provides effective torque and rotation control throughout the entire treatment, in its active mode.

ZIP Lp is equipped with **NITI** spring clip, strong enough for delivering continuous and consistent force and ensuring a tooth movements control. Its innovative "sandwich type" locking system prevents the clip from falling or blocking. Its retention is granted by an anatomical bondable 80 gauge mesh base, that increases its shear bond resistance reducing bonding failures.

ZIP_C

ZIP C combines advanced manufacturing techniques and state-of-the-art design, providing outstanding performance in rotational control, low friction and ease of use. The high-density ceramic material ensures the strength, providing also the brilliant aesthetics expected from today's most image-conscious patients. The smooth, rounded edges and low-profile hook provide the utmost comfort possible. Even so, what sets this bracket apart from other self-ligating appliances is the Nickel-Titanium spring clip and its Rhodium coating. The exceptional memory characteristic of Nickel-Titanium ensures reliable operation without the risk of deformation throughout the entire length of treatment, the Rhodium coating optimizes aesthetics.
