

# BONASIL A<sup>+</sup>

VPS Impression System

**DMP DENTAL**  
30+ Years of Clinical Excellence

# BONASIL A+

Uniquely formulated to easily & accurately capture surface detail without distortion.

With over 30 years of experience and dedication to clinical excellence DMP has been able to achieve the optimal combination of physical and mechanical properties that work together to create impressions of the highest detail even in the toughest clinical environment.

## Summary of Advantages

- Superior Hydrophilicity improves the flow and captures the finest detail.
- Excellent tear strength reduces defects in the final replica.
- Exceptional dimensional stability produces reliable impressions.
- High elastic recovery allows the material to maintain integrity upon removal.
- Vibrant color contrast makes the impression easy to read.
- Tasteless to neutralize the salivary glands and maintain a dry field.

## What the Experts are saying....

"After using several different brands of PVS materials, I have found that DMP products offer extremely accurate replicas even when using them in the most difficult cases."

*Dr. Ross W. Nash, DDS*

I was surprised to see that the BONASIL HTS light body was so much stronger and even removed some of the impression material that had torn sub-gingival from the previous impression material I used in the test"

*Dr. Joseph Pelerin, DD*

"Aquasil Ultra LV & BONASIL A+ Light HTS had the highest tear strength among products tested"

*Dr. Emmanouil Glynos;  
clinical testing done by Dental Advisor  
Research Report No:55, 8/12*

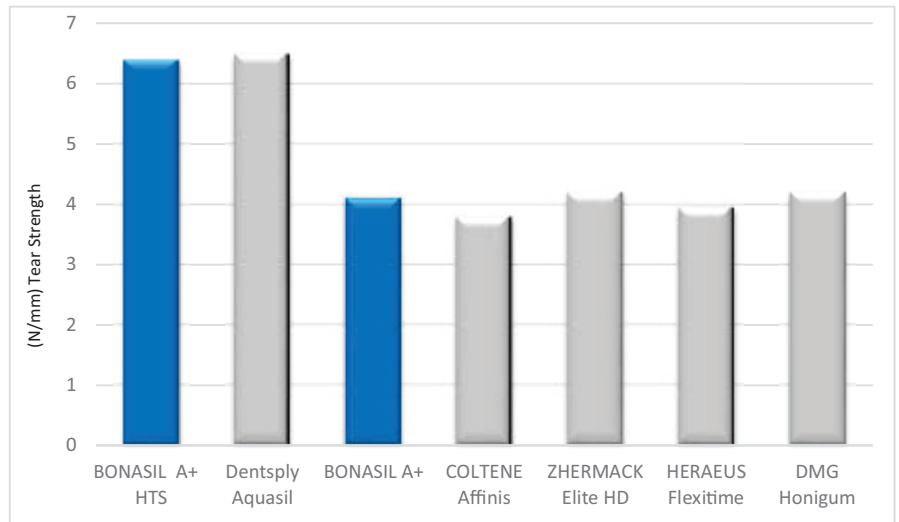

# Proven to outperform the competition.

## Highest Tear Strength

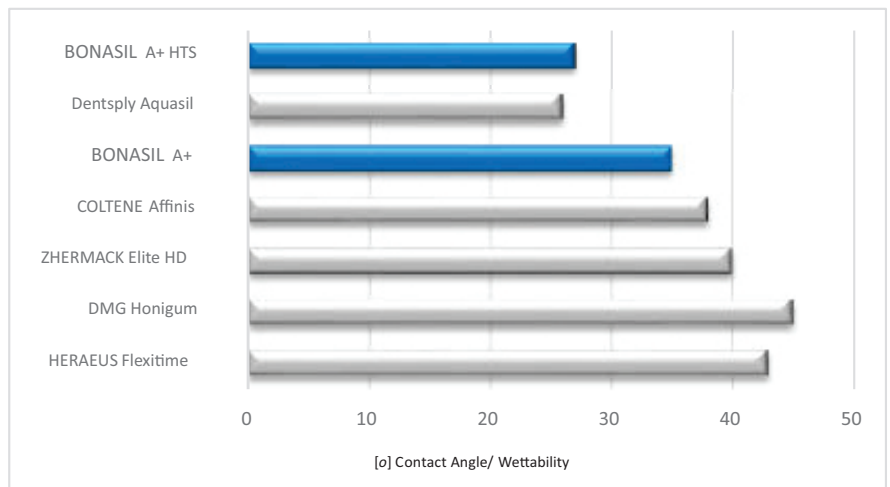

BONASIL A+ has one of the highest tear strengths on the market and can withstand the forces applied during removal without breaking or causing defects in the final replica.

Watch Our Bonasil A+ Light HTS Tear Strength Comparison Laboratory Test YouTube Video

## Superior Hydrophilicity

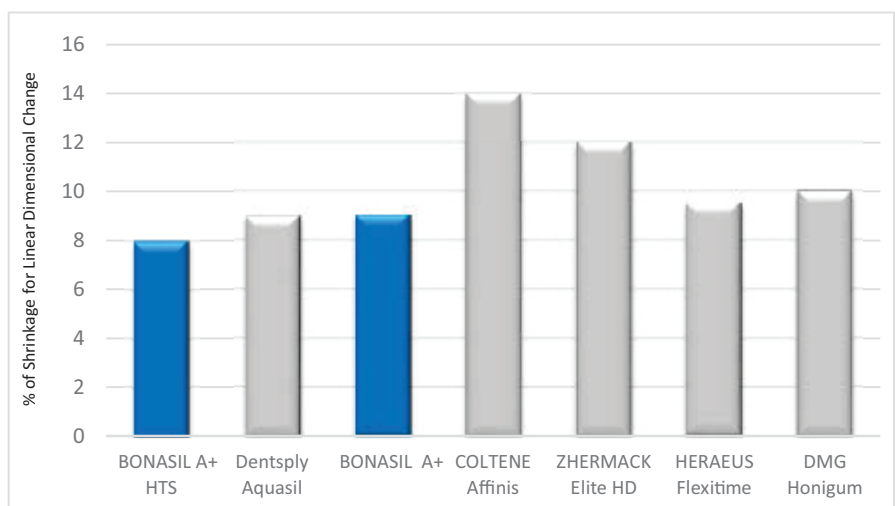

BONASIL A+ has special additives that improve hydrophilicity allowing the material to displace fluid and easily flow over the hydrophobic teeth and into the surrounding tissue.

## Exceptional Dimensional Stability

All VPS materials shrink due to the nature of their chemistry. The goal is to maintain accuracy by minimizing the amount they shrink.

BONASIL A+ has the lowest shrinkage percentage among competitors. With BONASIL A+ you can be confident you are getting reliable and accurate restorations every time.

# BONASIL A+

Available in a variety of viscosities & set times.

you can be confident you'll find the right material for any clinical application or procedural preference.

Product	Delivery System	Technique	Type	Indications									
				Crown/Bridge Work	Inlays, Onlays	Functional Peripheries	Functional Impression	Reline Impressions	Case study models	Orthodontic impressions	Impressions for removing prosthesis	Fabricating temporary impressions
