

THE ONLY NATURAL THERAPY FOR DRY MOUTH!

SaliPen is a state of the art medical device that treats dry mouth naturally.

SaliPen is the only long-term dry mouth cure that makes your mouth wet **with your own saliva without any side effects or chemicals!**

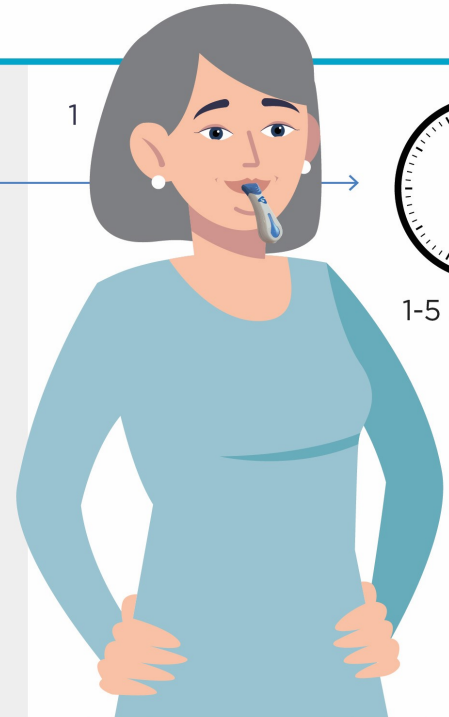

SaliPen uses low-voltage electrostimulation to increase saliva production and is not felt by the patient. Compared to other dry mouth treatments - medications, gums, sprays, lozenges and others - SaliPen is also **very cost effective.**

SaliPen is worn typically for only a few minutes every day (Picture 1). With persistent use, its effect lasts for hours.

SaliPen consists of two flexible arms with electrodes (Picture 2) that are placed in the mouth next to the inner gums of the lower wisdom teeth, as shown in the picture on the right, underneath the tongue (which is not shown). The rest of the device stays outside the mouth.
