# Huber Needles

Multimedical Huber needle is a device intended for infusion system for insertion into the septum of subcutaneously implanted port and infusion of fluids into the port.

The extension set is composed of a curved 90° Huber Needle connected to a PVC DEHP FREE 15cm length extension line ended by a luer lock connector.

Available models with injection point (Latex free) on Y connector.

**Main material:**

PC, PP, PVC, SUS304 Stainless Steel Cannula, Silicone oil

The size and length of the needle are shown on the product label in order to select the correct needle model to avoid to damage the port and / or to make a non-suitable infusion.

The canula form allows the port access reducing septum damages and patient's pain.

The integration of an extension line with Luer Lock connector allows the access to the patient and minimizes the infection risk.

**Multimedical Huber needle is Non-toxic and apyrogenic, completely free of latex components and DEHP.**

**Characteristic**

- Latex free
- Non coring
- DEHP Free
- SUS304 stainless steel needle
- A rotating wing provides less stress on both the tissue and the port
