

VeriFresh®

innovative oral care . . . naturally

VeriFresh makes healthier and more efficient oral care solutions – ones which we had to invent since we couldn't find them anywhere else.

VeriFresh's Natural Ingredients

Nature provides the active ingredients for our natural oral care gels. Some of the ingredients we use:

Pomegranate is an effective anti-inflammatory and a potent anti-oxidant.

Anise seed, a natural analgesic, possesses natural anti-bacterial, fungal and viral properties.

Tea tree oil contains some of nature's most powerful anti-bacterial properties. It is used as a topical anti-bacterial and is effective against bacteria causing bad breath.

In addition to being an antiseptic and anti-fungal, **Calendula** is also an anti-inflammatory which stimulates tissue

VeriFloss

The revolutionary flosser which makes flossing easy

- Exchangeable heads
- You pick which size floss works for you - S or M
- Head rotates to any angle of use for flexibility and efficiency
- Uses less floss than traditional flossing—you waste about 1 foot less of floss per session

Natural Gum Care

Meet the new weapon in fighting oral decay. Our gum care kit is positioned at the new frontier of oral care—gum care.

The kit combines our patented gum massager and all-natural gum care gel. The gel includes key natural anti-bacterial and anti-fungal ingredients which work in harmony with your oral cavity's natural microbial balance.

Natural Fresh Breath

In the battle for fresh breath, research has shown that the rear of the tongue is the primary culprit. The metabolic processes of bacteria and other micro-organisms that live on the rear of the tongue release offending gasses that cause bad breath or halitosis.

The solution is to clean the tongue and to do it with a specially designed —a tongue cleaner.

Our companion gel contains natural active ingredients which are derived from plants, many of which have been used in traditional remedies for generations.
