Micro Current Wellness Bands

The definition of micro current

- The inner body current lower than $1,000\mu\text{A}$
- Generated by the ion transfer between cells
- Used to transmit signals through whole body
 - around $10\mu\text{A} \sim 30\mu\text{A}$

Researches related to micro current has been implemented actively thanks to its potential effect.

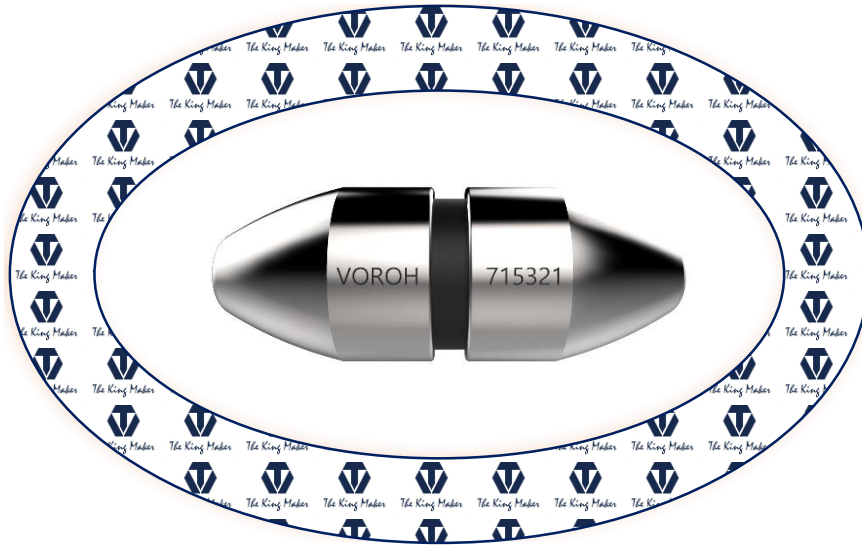

Dr. Erwin neher, Dr. Bert Sakmann- [Nobel Prize in Physiology or Medicine 1991](#)

Dr. Daniel L Kirsch invented Micro-Current Electrical for the first time to be recognized for reliability.
