

AirGuard™

BREATHE EASY

The AirGuard™ disrupts the fluid flow in a manner that forces aerosols to immediately evacuate the environment without flowing over the patient's face. Computational Fluid Dynamics studies show that when vacuuming from the side of the patient, the aerosols flow over the face of the patient before being removed from the environment.

5" diameter vacuum hose on side without the AirGuard™ XP

5" diameter vacuum hose overhead with the AirGuard™ XP

AIRGUARD™ PRODUCT LINE

An option for every office, from the simple but effective LT, to the technologically advanced MP, and the ultimate XP model. The AirGuard™ LT offers a competitive price for a reusable and disposable guard that, when attached to an extra-oral suction unit, will protect against aerosol and splatter. The AirGuard™ MP provides the same level of protection and also includes multi-use lighting that can change between warm white, cool white, amber and blue colors. The AirGuard™ XP is an all-in-one solution that includes extra-oral suction, an aerosol barrier, intra- and extra-oral lighting, magnification, and a high-def camera. All AirGuard™ models deliver enhanced protection for the dentist and their patients from the spread of infectious disease through aerosols.

Breathe Easy.
